

Machine-coded candidate landscape

PRESENT-label co-occurrences among 9,505 unique canonical candidate records

Discovery counts only—not verified assistance—modality mechanisms and not prevalence across the literature

	Desktop/Planar	Large Display	VR	AR/MR	CAVE
Algorithmic	2,837	37	511	399	11
Adaptive	806	12	185	190	2
Conversational	86	1	15	22	0
Immersive	112	20	428	346	8

Counting unit: one unique canonical candidate record per cell when both provisional labels are PRESENT. Multilabel cells are non-additive.
The coding contract required PRESENT / ABSENT / UNCERTAIN for every label; omitted CSV labels therefore mean ABSENT.
Task-state distributions within every cell are reported in candidate_cell_task_distributions.csv; no task or evidence claim is inferred from this chart.
