

Assistance × Visualization Modality

Distinct full-report-supported systems in the cumulative bounded assessed set

78/285 systems have ≥1 supported placement · 118 completed system assessments · 122 non-additive system–cell placements

	Desktop/Planar	Large Display	VR	AR/MR	CAVE
Algorithmic	n=51 Robin · CFS CellWhisperer · CFS +49 systems	n=4 Echo · CFSR MinOmics · NCFS +2 systems	n=15 VROOM · NCFS RATS VR · NCFS +13 systems	n=18 Vitessce Link · NCFSR AR Microscope · CFS +16 systems	n=3 iCAVE · NCFSR ExaViz · NCF +1 system
Adaptive	n=4 Facetto · NCFS Metis · NCFS +2 systems	— <i>not represented in assessed systems</i>	n=3 SAMIRA · NCFS AI annotation · NCFS +1 system	n=1 Liver MR · NCFS	n=1 ExaViz · NCF
Conversational	n=10 CellWhisperer · CFS Robin · CFS +8 systems	— <i>not represented in assessed systems</i>	n=2 SAMIRA · NCFS ASCRIBE-XR · NFSR	— <i>not represented in assessed systems</i>	— <i>not represented in assessed systems</i>

Boundary evidence retained but not counted

- iCAVE: tracked CAVE viewpoint does not show analytic computation changing with context (Immersive rejected).
- Gene Tracer: voice requests are implemented, but dialogue beyond command-style retrieval remains unresolved (Conversational).
- 5-D stem-cell correction: edits alter results, but no model learning from correction is shown (Adaptive rejected).
- VROOM: immersive cohort exploration does not establish context-dependent computational assistance (Immersive rejected).

Task symbols: N navigation/multiscale · C comparison/differentiation · F selection/filtering/precision · S sensemaking/hypothesis · R coordination/collaboration

Eligible systems are counted once per cell; related reports are linked; cells are multilabel and totals are not additive.

Empty cells mean “not represented in assessed systems,” not “no systems or literature exist.” Automated assessments remain pending author approval.
